

How to do settings to print sales invoice on two different printers at the same time?

There may be times when you want to print more than one receipt of sales invoice at the same time, but on different printers.

This feature is quite useful for restaurants where once an order is placed, a copy of the sales invoice simultaneously gets printed in the main counter and kitchen, so there is no delay in getting the order ready in time. This way there is no communication error as well.

To do this in HDPOS smart, follow the steps below.

1. Run HDPOS smart. Click on **Set-Up**.

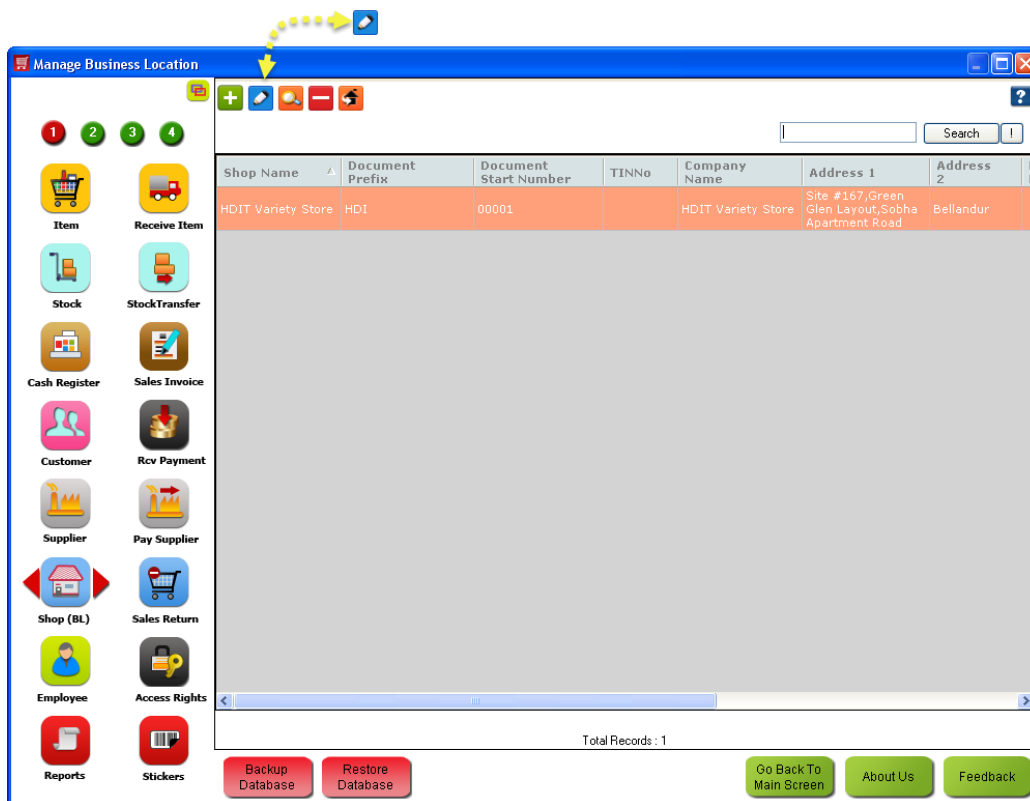

S No.	Barcode	Item Name	Qty / Weight	Measuring Unit	Unit Price with Tax	Total with Tax
-------	---------	-----------	--------------	----------------	---------------------	----------------

2. From 1st page, click on **Shop (BL)**.

3. Select the business location and click on **Edit Business Location**.

4. In the **Edit Business Location** screen, in the **Additional Receipt Settings** section:
 - a. Check the checkbox **Print second receipt on different printer** checkbox.
 - b. Check the checkbox **Ask to print every time** if you want to print the invoice on second printer every time.
 - c. Select the printer on which you want to get a second print of sales invoice.
Note: Make sure to have both printers connected to computer where you are using HDPOS smart.
 - d. Select the report of sales invoice in which format the second print should come.
 - e. You can enter the number of prints you want on second printer.
 - f. Click on **Update**.

Edit Business Location
