

How to restore database in HDPOS lite?

Restoring a database means replacing your existing database with some other database.

To restore a database in HDPOS lite, follow the steps below.

1. Run **HDPOS lite**.
2. From main screen, click on **Set-Up**.

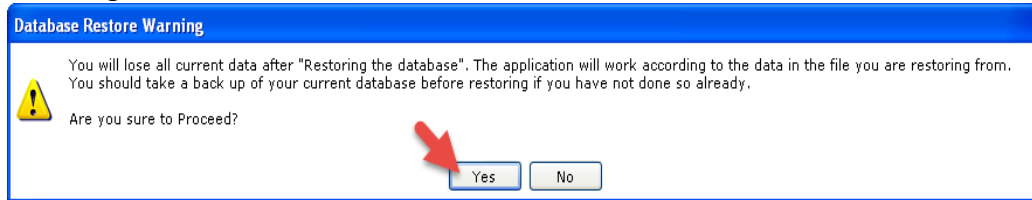

3. From **Set-Up** screen, click on **Restore Database**

Restore Database

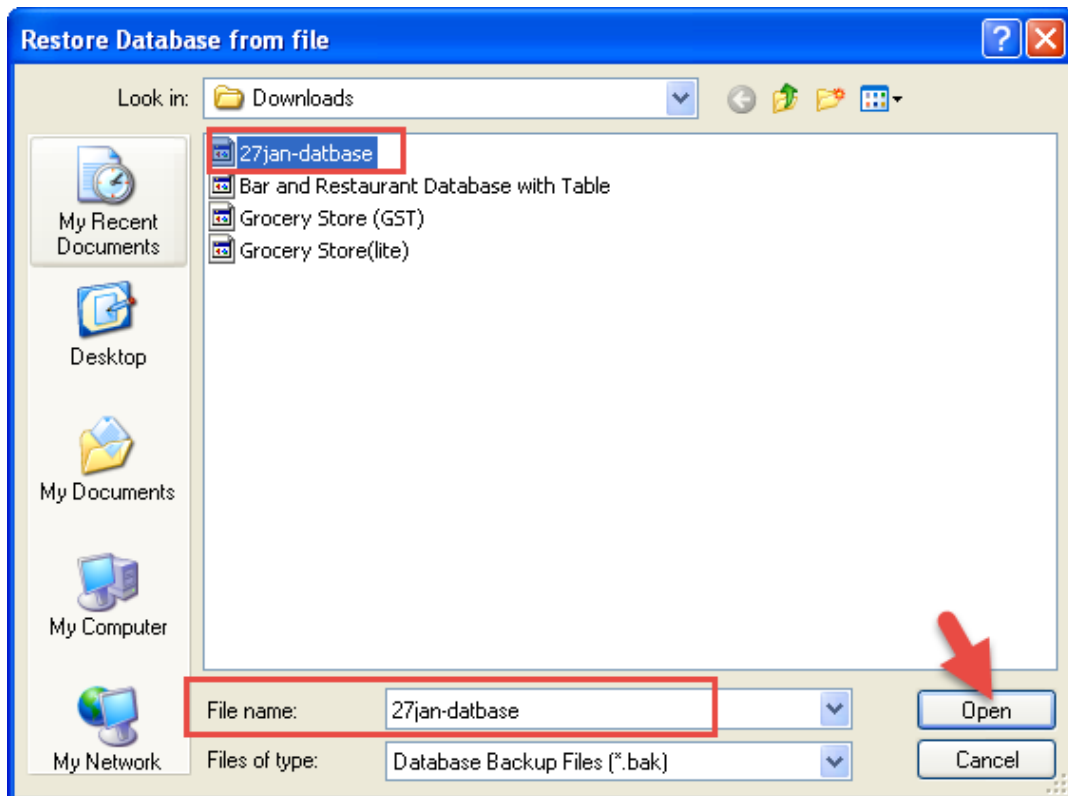

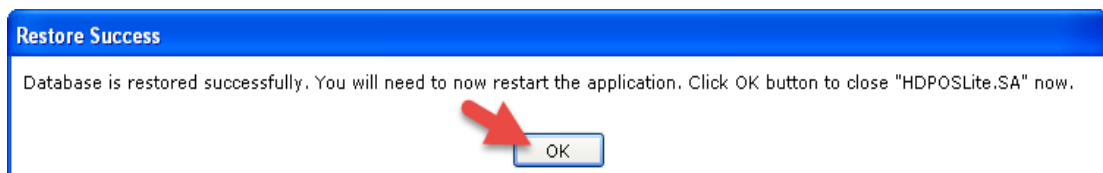

4. A **Database Restore Warning** message will be shown to confirm whether to proceed or not. You will lose all your existing data and it will be replaced with the data of restoring database. Click on **Yes**.

5. Select the database file that you want to restore. Click on **Open**.

6. A **Restore Success** message will be shown to you asking to restart the application
7. Click on **OK**.

8. HDPOS lite will get restarted and it will show you details of restored database.

Note: We recommend you to take your database backup before restoring the existing database.
